## **DSS4004S2 Product Update Guide**

## 1. Preparation

Note: If on-site data backup is required, back up accordingly before update as follows:

2. If DSS is updated from version 1.000.0000000 to version 1.001.0000000, make sure on site that the CMS port and the MQ port are at default settings (it is not allowed to modify these two ports for version 1.001.0000000).

Quick Guide	If the system visits WAN via i mapping, then you do not ne	nternal and external mapping ed to change port setup.(The l	of router, then you n MQ ports of the inte	eed to fill in WAN add rnal and external ne	dress an tworks
Segment Setup	Local Address:	10.35.94.20			
TCP/IP	WEB:	80			
LAN/WAN Mapping					
Basic 🗸	Router Address:				
Security Setup	CMS 0: 9000	DMS 6:	9200	MTS 6:	9100
SSH Connection Setup	SS 0: 9320	ADS ():	9600	PESO:	9400
HTTPS Setting	ARS 1: 9500	MGW ():	9090	PTS 0:	8081
Self-check	MQ 0: 6161	5 WEB 0:	80	L	

3. Download ConfigTool

Enter IP/config in the browser to open the following screen: Click **Download Config Tool**.

 Open ConfigTool and log into the platform to be updated. Default Port: 3800 Default User Name: admin Default Password: The login password for the config screen.

- 6. After update, the system will reboot automatically.
- 7. After system reboot, visit the IP/config screen in the browser and log in (the default User Name: admin).

## 8. Basic -> Maintenance -> Restore Default

Note: This will restore the device to the factory defaults and clean up the files of the previous version. Cleanup is allowed in case of any abnormality after update and no need to archive any old data on site.
